

Harry Potter's world

IRI:

<http://www.semanticweb.org/39345/ontologies/2022/3/harryPotter>

Date :

21/04/2022

Current version :

1.1 added rdfs:isDefinedBy for all named entities

Authors :

Debora De Gaetano
Elisa Chierchiello

Extracted from :

([visualise it with LODE](#))

Covers requirements :

- What concept is assigned to this entity? Which category does this entity belong to?
- What role does this object play? which objects do play that role?
- What things are contained in this collection (community, collective)? What collections this thing is member of?
- which agent does play this role? what is the role that played by that agent?

Has Consequences :

- Collections and their members can be associated. Time-indexed membership cannot be represented though (you need a situation-based pattern).
- It is possible to make assertions about e.g., categories, types, roles, which are typically considered at the meta-level of an ontology. Instances of Concept reify such elements, which are therefore put in the ordinary domain of an ontology. It is not possible to parametrize the classification over different dimensions e.g., time, space, etc.
- It is possible to make assertions about roles, which are typically considered at the meta-level of an ontology. Instances of Role reify such elements, which are therefore put in the ordinary domain of an ontology. It is not possible to parametrize the classification over different dimensions e.g., time, space, etc.
- This CP allows designers to make assertions on roles played by agents without involving the agents that play that roles, and vice versa. It does not allow to express temporariness of roles.

Has Intent :

- To represent agents and the roles they play.
- To represent domain (not set theory) membership.
- To represent the relations between concepts (roles, task, parameters) and entities (person, events, values), which concepts can be assigned to. To formalize the application (e.g. tagging) of informal knowledge organization systems such as lexica, thesauri, subject directories, folksonomies, etc., where concepts are first-order elements.
- To represents objects and the roles they play.

Is Specialization Of :

([visualise it with LODE](#))

([visualise it with LODE](#))

Related Content Patterns :

([visualise it with LODE](#))

([visualise it with LODE](#))

([visualise it with LODE](#))

([visualise it with LODE](#))

Scenarios :

- Mac OSX 10.5 is classified as an an operating system in the Fujitsu-Siemens product catalog.
- My saxophone collection includes a Mark VI tenor, a Balanced Action alto, and a Conn Transitional bari.
- She greeted us all in her various roles of mother, friend, and daughter.
- This old glass is used as a flower pot.

[alt label^{ap}](#)

[back to [ToC](#) or [Annotation Property ToC](#)]

IRI: <http://www.w3.org/2004/02/skos/core#altLabel>

[covers requirements^{ap}](#)

[back to [ToC](#) or [Annotation Property ToC](#)]

IRI: <http://www.ontologydesignpatterns.org/schemas/cpannotationschema.owl#coversRequirements>

This annotation property is used for exemplifying possible requirements the content pattern provides a solution for. Requirements are expressed as natural language competency questions.

[creator^{ap}](#)

[back to [ToC](#) or [Annotation Property ToC](#)]

IRI: <http://purl.org/dc/elements/1.1/creator>

[date^{ap}](#)

[back to [ToC](#) or [Annotation Property ToC](#)]

IRI: <http://purl.org/dc/elements/1.1/date>

[description^{ap}](#)

[back to [ToC](#) or [Annotation Property ToC](#)]

IRI: <http://purl.org/dc/elements/1.1/description>

IRI: <http://www.ontologydesignpatterns.org/schemas/cpannotationschema.owl#extractedFrom>

This annotation property should be assigned with a URI, which points to the possible reference ontology which the annotated pattern was extracted from (i.e. the reference ontology that the ontology elements have been deeply or partially cloned by). The range is not explicit in the definition of the annotation property because it would turn the ontology to OWL Full. E.g. The participation pattern is extracted from the Dolce Ultra Lite ontology, hence the value for this annotation property is <http://www.ontologydesignpatterns.org/ont/dul/DUL.owl>

IRI: <http://www.ontologydesignpatterns.org/schemas/cpannotationschema.owl#hasAuthor>

IRI: <http://www.ontologydesignpatterns.org/schemas/cpannotationschema.owl#hasConsequences>

This annotation property is used for briefly describing the benefits and/or possible trade-offs when using the CP.

IRI: <http://www.ontologydesignpatterns.org/schemas/cpannotationschema.owl#hasIntent>

This annotation property is used in order to describe the intent of the content pattern.

IRI: <http://www.ontologydesignpatterns.org/schemas/cpannotationschema.owl#isCloneOf>

This annotation property is used for referring a cloned ontology entity to its cloning source.

IRI: <http://swrl.stanford.edu/ontologies/3.3/swrla.owl#isRuleEnabled>

IRI: <http://www.ontologydesignpatterns.org/schemas/cpannotationschema.owl#isSpecializationOf>

This annotation property is useful for content ontology design patterns and its elements. Its value is a URI, which refers either to a content ontology design pattern that is specialized by the annotated one, or to an ontology element that is specialized by the annotated one.

IRI: <http://purl.org/vocab/vann/preferredNamespacePrefix>

IRI: <http://purl.org/vocab/vann/preferredNamespaceUri>

IRI: <http://www.ontologydesignpatterns.org/schemas/cpannotationschema.owl#relatedCPs>

This annotation property can be used to indicate other CPs (if any) that specialize, generalize, include, or are components of the CP. Furthermore, this field may indicate other CPs that are typically used in conjunction with the described one. Important similarities and differences with other patterns can be also described here.

scenarios^{ap}

[back to [ToC](#) or [Annotation Property ToC](#)]

IRI: <http://www.ontologydesignpatterns.org/schemas/cpannotationschema.owl#scenarios>

This annotation property is used for describing examples of instantiation of the Content OP. For example, for the part-of Content OP (which represents part-whole relations) a possible scenario is the sentence: "the brain is part of the human body". Scenarios are expressed as natural language sentences.
